

FILTERS FOR DUST COLLECTION

Fab-Tex Filtration produces superior quality air filtration solutions for applications across a variety of industries.

Our extensive product line includes Cartridge Filters, Pleated Filter Elements, Air Intake Filters, Vacuum Truck Filters, Filter Bags and Accessories, and more. Many of our product lines offer a number of options and configurations. We also provide custom products specifically designed to meet your individual needs. Whatever your requirements, Fab-Tex has the filtration solution you've been looking for.

Fab-Tex's Innovative Filtration Products

Cartridge Filters

Fab-Tex Filtration cartridge filters are designed to meet or exceed OEM specifications for construction and operation. Made in a wide variety of sizes, replacement filters are available to fit almost all dust collection equipment in the marketplace, including Torit, Farr, Murphy, AAF, BCP, Wheelabrator, Nordson, and more. Many material options are available for even the toughest operating conditions, featuring:

- High Temperature resistance, up to 400° F
- Ultra-high efficiency PTFE membrane + nanofiber medias
- Electrically conductive medias to control static discharge

Filter Bags and Accessories

Filter bags are available to fit almost any pulse jet, reverse air, or shaker-type dust collector in standard and custom sizes. Many media options are available, including high-temperature fabrics, corrosion-resistant fabrics, and easy-to-clean teflon-coated media. Fab-Tex also provides cages and retainers in standard mild steel, galvanized steel, stainless steel and epoxy-coated wires.

Pleated Filter Elements

Pleated filter elements are designed to replace typical bag/cage installations in pulse cleaning dust collectors. The elements will increase the available filter area by 2 to 4 times depending on the configuration. They are the answer to overworked and undersized bag/cage installations.

Elements are available in a multitude of both top and bottom load configurations to fit most standard tubesheet and bag cup designs. In most cases they can be retrofitted without any modification to existing equipment.

Air Intake Filters

Fab-Tex offers a complete range of high-efficiency air intake filters to protect Industrial blowers, air compressors, diesel-or gas-fired industrial engines and turbines, or any other air intake filtration requirement. Filters are available in a wide selection of media and sizes, from standard cellulose-based disposable filters to high-pressure polyester mesh-backed and all-metal media filters.
